

Create a custom scenario in 15 minutes

Unlike other platforms with limited case libraries, Sapient Clinician empowers you to build fully custom, curriculum-aligned scenarios that meet your exact educational objectives.

Our AI-assisted scenario builder streamlines the creation process while ensuring clinical accuracy. Simply define the case specifics—patient details, chief complaint, learning objectives, and diagnostic criteria—and our AI system generates appropriate review of systems and diagnostic results for you to review and modify as needed.

The scenario builder captures comprehensive case details to ensure every learner receives a consistent, high-quality experience while maintaining the flexibility for natural conversation and clinical exploration.

History

Past medical history
Diffuse large B-cell lymphoma, refractory to multiple lines of therapy (R-CHOP, RICE, and auto-SCT).
Hypertension, well controlled on meds.
Include current and pre-existing conditions.

Surgical history
Right ACL reconstruction (2012)

Family medical history
Mother: Hypertension, breast cancer (alive)
Father: Myocardial infarction at 68 (deceased)

Social history and social determinants of health
Former smoker (20 pack-years, quit 10 yrs ago).
Rare EtOH use.

Define your own case objectives

Create scenarios targeting any clinical skill:

- **Clinical reasoning:** Diagnostic workups, differential diagnosis development
- **Communication:** Delivering difficult news, patient counseling, family discussions
- **Procedural planning:** Treatment selection, care coordination, obtaining consent
- **Triage and assessment:** Emergency protocols, priority setting

Create lifelike patients you can talk to

Sapient Clinician goes beyond symptoms to create fully-realized patients. Customize patient personalities, cultural backgrounds, and behavioral responses to create authentic learning experiences that prepare students for diverse patient encounters.

Voice Mode adds another layer of realism with natural speech interaction and emotionally-responsive patient voices, making conversations feel genuinely human.

When did this first start?

I started having sharp chest pain two days ago. It's mostly on the left side of my chest, and it gets worse when I lie down.

That sounds painful, I'm sorry that...
